About the Book

Enumeration of trees in the campus of Higher Academic Institutes like colleges and universities is a step towards raising awareness among stakeholders in a way to transfer that into green campus. Estimating potential capacity of trees for carbon sequestration is a prerequisite for green auditing of the campus. In the context of global climatic change, a responsible citizen must be aware of environment and has to show responsibility to conserve nature. Academic Institutes are entrusted to develop environmental awareness among the students who in turn, will become responsible citizen in future. In this background, enumeration of trees and their capacity to absorb Carbon-di-Oxide in Vidyasagar University Campus was attempted as a step towards sensitizing students on their duties and responsibility towards their ambient environment.
